Education

Universidad de Costa Rica (UCR)

2026

Bachelor of Computer Science (Software Engineering)

Experience

ECCI Control – Universidad de Costa Rica

San José, CR

Software Engineering Project

2024 – 2025

- Developed a QR-based electronic access control system as part of an academic assistance program.
- Gathered requirements through interviews with students and faculty.
- Replaced manual registration with a secure and traceable digital system.

deferia.cr (UCR x FAO)

Remote

Software Engineer

2023 – 2025

- Built a data-driven platform using agricultural price data from the CNP.
- Cleaned and normalized datasets for PostgreSQL and Django integration.
- Implemented interactive visualizations for historical price analysis.

Issimo Suites Hotel

Quepos, Costa Rica

Web Developer

2022 – 2025

www.issimosuitescr.com

- Developed and maintained the hotel website using Wix and custom JavaScript.
- Improved SEO, site structure, and analytics-driven performance.

Projects

Mejengas App — Flutter, Supabase, Real-time Sessions

mejengas-live.vercel.app

- Designed and developed a real-time team management app inspired by Kahoot-style sessions.
- Implemented anonymous session joining via link, code, or QR without account creation.
- Built a player rating system (1–10) to enable fair team balancing and re-randomization.
- Used Supabase for real-time data synchronization, session state, and backend services.

Geopolitical Risk Analytics — Python, Streamlit

Live App

- Built an interactive dashboard to analyze geopolitical risk indicators across countries.
- Identified correlations between geopolitical events and economic instability metrics.
- Enabled comparative analysis through dynamic filters and time-based visualizations.

Market Price Analytics — Python, Streamlit

Live App

- Developed a data visualization tool for agricultural market prices and trends.
- Processed and analyzed historical price data to identify seasonal and regional patterns.
- Designed interactive charts to support data-driven decision making.

Skills

Languages: Python, JavaScript, TypeScript, Dart, Java, C++

Frameworks: Flutter, Django, FastAPI, Flask, React, Next.js

Databases: PostgreSQL, Supabase, SQL

Tools: Docker, Git, AWS, Figma, Wix

AI & Productivity: LLM-assisted development, prompt engineering, workflow automation, rapid prototyping using modern AI tools

Practices: REST APIs, Agile/Scrum, Unit Testing, System Design

Languages: Spanish (Native), English (Professional), Italian (Native)
